Ultra-Trail Australia 50 Training Program

NOTES

LSD Runs - Your Weekend runs must be run around 90 to 120 seconds per km slower than your 5km pace. If you're unsure what your 5km pace is then simply go at a slow comfortable pace during these runs, slower than your usual morning run pace. The emphasis for these long runs is on the **SLOW** part. I cannot emphasise enough, all long runs should be LSD or Long Slow Distance runs where the focus is on completing the distance instead of running to a time. This will help build stamina and the slower pace will ensure you avoid any injuries. Take your time with these sessions and don't worry about your pace. The slower the better ! :-)

Recovery after your long runs - You will need to have an ice bath or alternatively jump in the ocean for 15 minutes after your long runs. This is **ESSENTIAL** for recovery and will prevent injury. Also please ensure you rehydrate and eat some carbohydrates (i.e. 2 bananas) after your long runs to assist with muscle repair. Eating watery fruit like watermelon or rock melon is also a great idea after your long runs as this will provide you with some extra electrolytes. Coconut water is great too for electrolyte replacement.

Eating and drinking on the long run - You will need to take some snacks and water with you on these long runs. If you do not hydrate you are risking injury so please please *please* take water and a few snacks with you ! The general rule is 200 calories an hour and 750 millilitres of water an hour. Hydration packs and Fuel Belts are available in the Manly Beach Running Club Online Store - <http://manlybeachrunningclub.com/store-2/#!/~/product/category=5526040&id=23278243>

Ultra-Trail Australia 50 Training Program

Missing a run - Missing the odd run during this program is inevitable and is factored into the training plan with lots of time and opportunities to make up for missed training. Life often gets in the way of training and this is to be expected. If you miss a training run/ride don't panic, this program is designed to be used as a guide but it is not set in stone. Obviously the closer you stick to the plan the better prepared you will be but missing a couple of sessions will not jeopardise your performance on race day. Please feel free to contact me if we need to make any amendments or changes to the training plan and I will be happy to discuss this with you and factor in holidays and/or family/work commitments.

Long Runs - Manly Beach Running Club will be running a long run every weekend and Coach Joe will be providing support and encouragement the whole way. Please join us for a run whenever possible so Coach Joe can track your progress and answer any questions you may have about your training.

Rest Days - A rest day means exactly that, no sport and no cross training of any kind. Complete rest please !! Rest will give your body the time to repair and adapt to the new stress you are placing on it and this component of the program should be treated as equally important to the training. Without rest, your body will not be able to strengthen the muscles or repair in time for the next training session. I would suggest that the rest day is after your long run day because this will give your body the time it needs to replenish glycogen stores in your muscles and repair. If you decide you want to swap your rest day around, please ensure you have at least one rest day before the next long run. Any questions please feel free to ask me.

Further info and questions - If you have any other questions or need any more info please contact Joe on 0433 819 514 or email manlybeachrunningclub@mail.com
